

# AI for Regulators

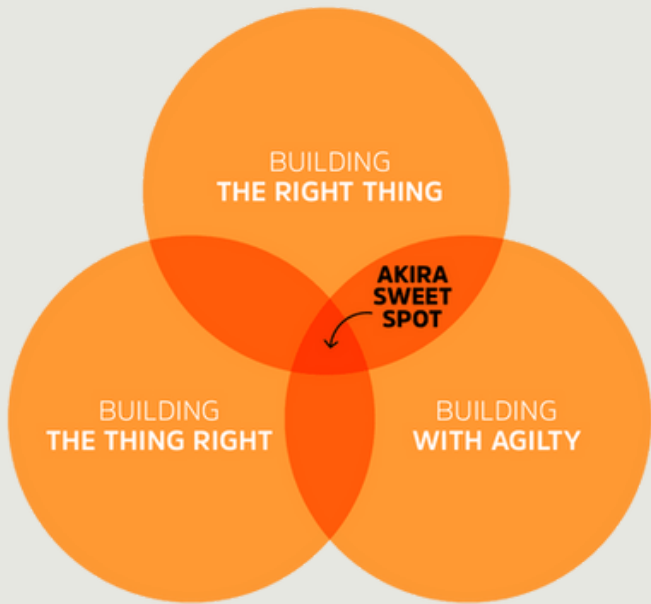

Government agencies face significant challenges in managing the overwhelming amount of public feedback on major orders and regulations. Tens of thousands of comments come flooding in, resulting in a manual comment processing effort which is inefficient and costly.

At the core of the operations lies data. To harness its full potential agencies must effectively manage, analyze, and utilize vast datasets. Our AI Service offers a comprehensive suite of tools to enhance efficiency, accuracy, and security. By leveraging advanced AI techniques, we can process vast amounts of data, generate insightful summaries, and provide intelligent chatbot assistance within a fraction of the time it takes to do manually. Our Solutions prioritize data privacy and security, ensuring compliance with stringent regulations. We also offer Retrieval Augmented Generation (RAG), allowing our AI models to access and process information from industry-specific sources. Akira's AI capabilities provide more accurate and relevant responses while still maintaining secure and responsible implementation.

## OUR CLIENTS

### ABOUT AKIRA

At Akira, we believe that cloud is the enabler, data is the driver, and AI/ML is the differentiator. We bring them together to help you make smarter, faster decisions that help enhance your organization's ability to deliver on its mission at any scale. And because we understand that people are central to the success of any technology transformation, we bring the cross-functional skills to both deliver mission objectives and facilitate cultural change – empowering your workforce to use data and AI responsibly and effectively.

### AI Assessment Services

Akira's assessment begins with an initial consultation of current practices at all steps of the data pipeline as well as a review of Federal and agency requirements. From data collection to data analysis we 1) identify any tasks that are repetitive, time consuming, or otherwise manually-intensive, (2) implement AI solutions that speed up the process while maintaining data integrity and enhance data visualization, and (3) tailor the build to specific requirements and regulations.

**AI Assessment Services**

- Identify Tasks
- Implementing Ai Solutions
- Requirement Recommendations

### AI Solutions

To maximize insights from data, Akira employs several advanced techniques to highlight trends and answer critical questions. Key features include data categorization and tagging, which automatically classifies data based on topics, keywords, and sentiment; summary analysis, which generates concise, accessible summaries and actionable items based on trends; and a user-friendly chatbot interface. The chatbot features a pop-up design capable of answering both general and agency-specific questions while ensuring customizable data access for enhanced security.

**AI Solutions**

- Data Categorization
- Summary Analysis
- Chatbot Interface

### Benefits of our Product

Akira's AI significantly enhances the regulatory process by delivering key advantages. It improves efficiency by automating tasks that would be impossible for humans to complete manually and processes massive volumes of comments with exceptional scalability. The system also minimizes time consumption by generating accurate summaries and insights quickly. Additionally, Akira ensures a seamless user experience through an intuitive interface designed for easy adoption, even by non-technical users.

**Benefits of our Product**

- Efficiency Boost
- Scalable Processing
- Intuitive Interface
